## Editorial

Since our creation in 1972, we have always been driven by the pioneering spirit that made us: as a European food packaging specialist, we aim to offer the market innovative and environmentfriendly products, but we also aim to build relationships of trust with our customers based on our professionalism and perfect service. Our customers' satisfaction guides each decision and action we take. This is why the development of our Group is inseparably bound up with strong values that we carry every day, which are excellence, respect, team spirit, and openness to progress and performance. But our greatest wealth above all are our employees brought together around one common company mission that they support with pride and passion.

All this makes GUILLIN a committed and responsible brand with a single mission: protect your food.

A handwritten signature in black ink that reads "Sophie Guillain".

GUILLIN  
1972 - 2022

François GUILLIN  
Chairman of the Board of Directors

Sophie GUILLIN  
CEO

**Created in 1972, the GUILLIN Group is a family business founded upon the values of a rural area, but focused on innovation and international development:**

**Our profession:** designing, manufacturing and marketing innovative packaging solutions through our key business values «quality, range, service»

**Our driving force:** evolving thanks to continuous innovation

**Our ambition:** being the European manufacturer of choice in food packaging solutions and serving its customers, consumers and the planet.

<b>741</b> M€ Turnover		<b>21 500</b> products

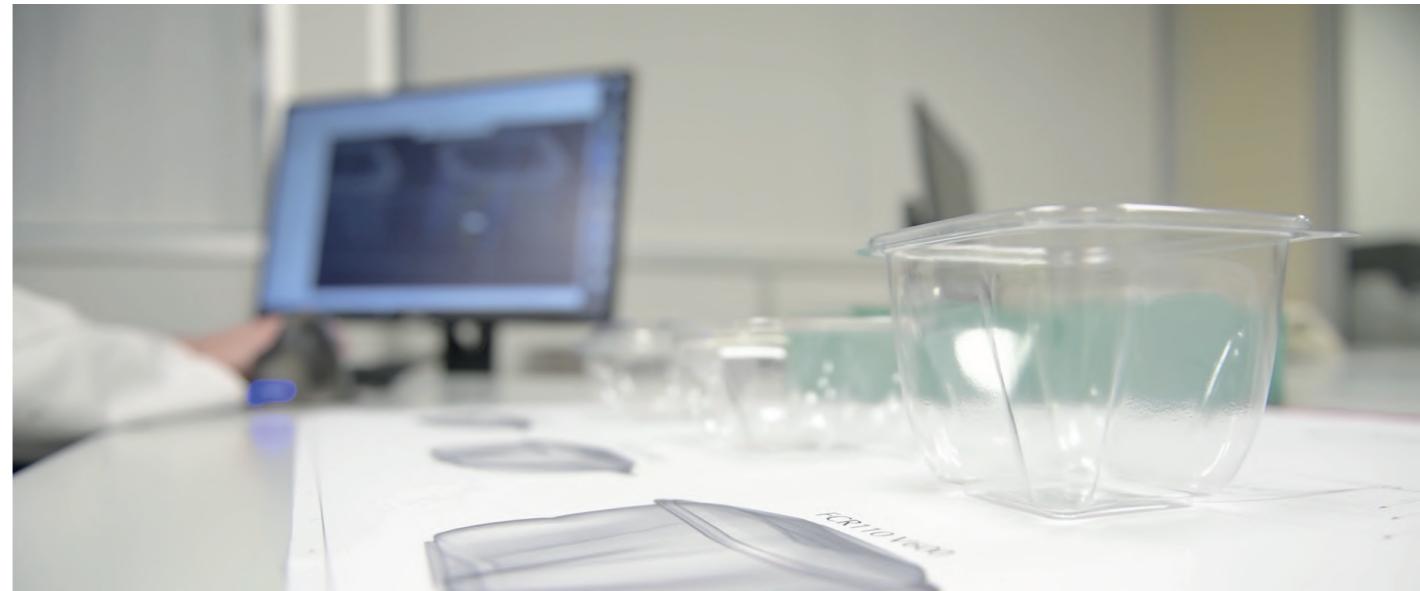

# Our difference

Catalogue Guillain food industry

## Performance & Service

We have developed a dual industrial and logistics excellence that allows us to offer wide ranges and transform our customers' complex problems into simple solutions in order to provide them with a unique, responsive and flawless service (manufacturing quality, wide ranges, 12,000 products on stock).

## Innovation & Design

Pioneering and innovating since the beginning, we anticipate the future needs that will impact our products (respect for the environment, preservation and protection of food, evolution of lifestyles) and we continuously create new packaging solutions of which design combines aesthetics, quality and functionality, with the objective of improving the final consumer's life.

## Responsible Leadership

We take responsibility for a sustainable leadership by supporting a well-reasoned usage of packaging and by totally integrating them into the circular economy and environmental impact. Right from its design phase, each product has to meet environmental requirements which relate as much to its own features as to the place where it is manufactured in order to reduce transportation emissions.

# Our commitments to the environment

Since 1972, protecting food and the people has been our mission, by creating adapted, evolving and environmental-friendly food packaging solutions: protecting is part of our DNA.

Today, the major subject to be dealt with is global warming, CO<sub>2</sub> emissions and their impact on the planet; this is why our commitment to the environment is focused on one objective, which is producing 100% responsible packaging to keep our carbon footprint to an absolute minimum. Our concern is constantly to reconcile the preservation of the environment and the protection of people, while making sure our actions favour both.

We limit our environmental impact

As supporters of a reasoned use of packaging, we make sure its carbon footprint is as small as possible during its whole life cycle.

For more than 20 years, we have been eco-designing our packaging, which resulted in a reduction of 40% in weight for some references, also sharply decreasing the transport footprint.

We integrate at least 30% rPET into our PET packaging, which significantly improves its carbon footprint. This percentage may vary depending on the applications and it can reach 100% for some specific ranges. By 2025, we aim to be over 50% in 2025. Cardboard packaging that we manufacture are FSC® certified (they respect sustainable forest management).

We are  
100% part of  
the circular economy

We commit  
ourselves through  
concrete actions

All our packaging is recyclable, reusable or compostable. It represents a reliable financial and environmental alternative suitable for all applications. It meets the most stringent criteria for food safety, regulations, protection of food and the environment, reduction of waste and practicality. There are three different categories:

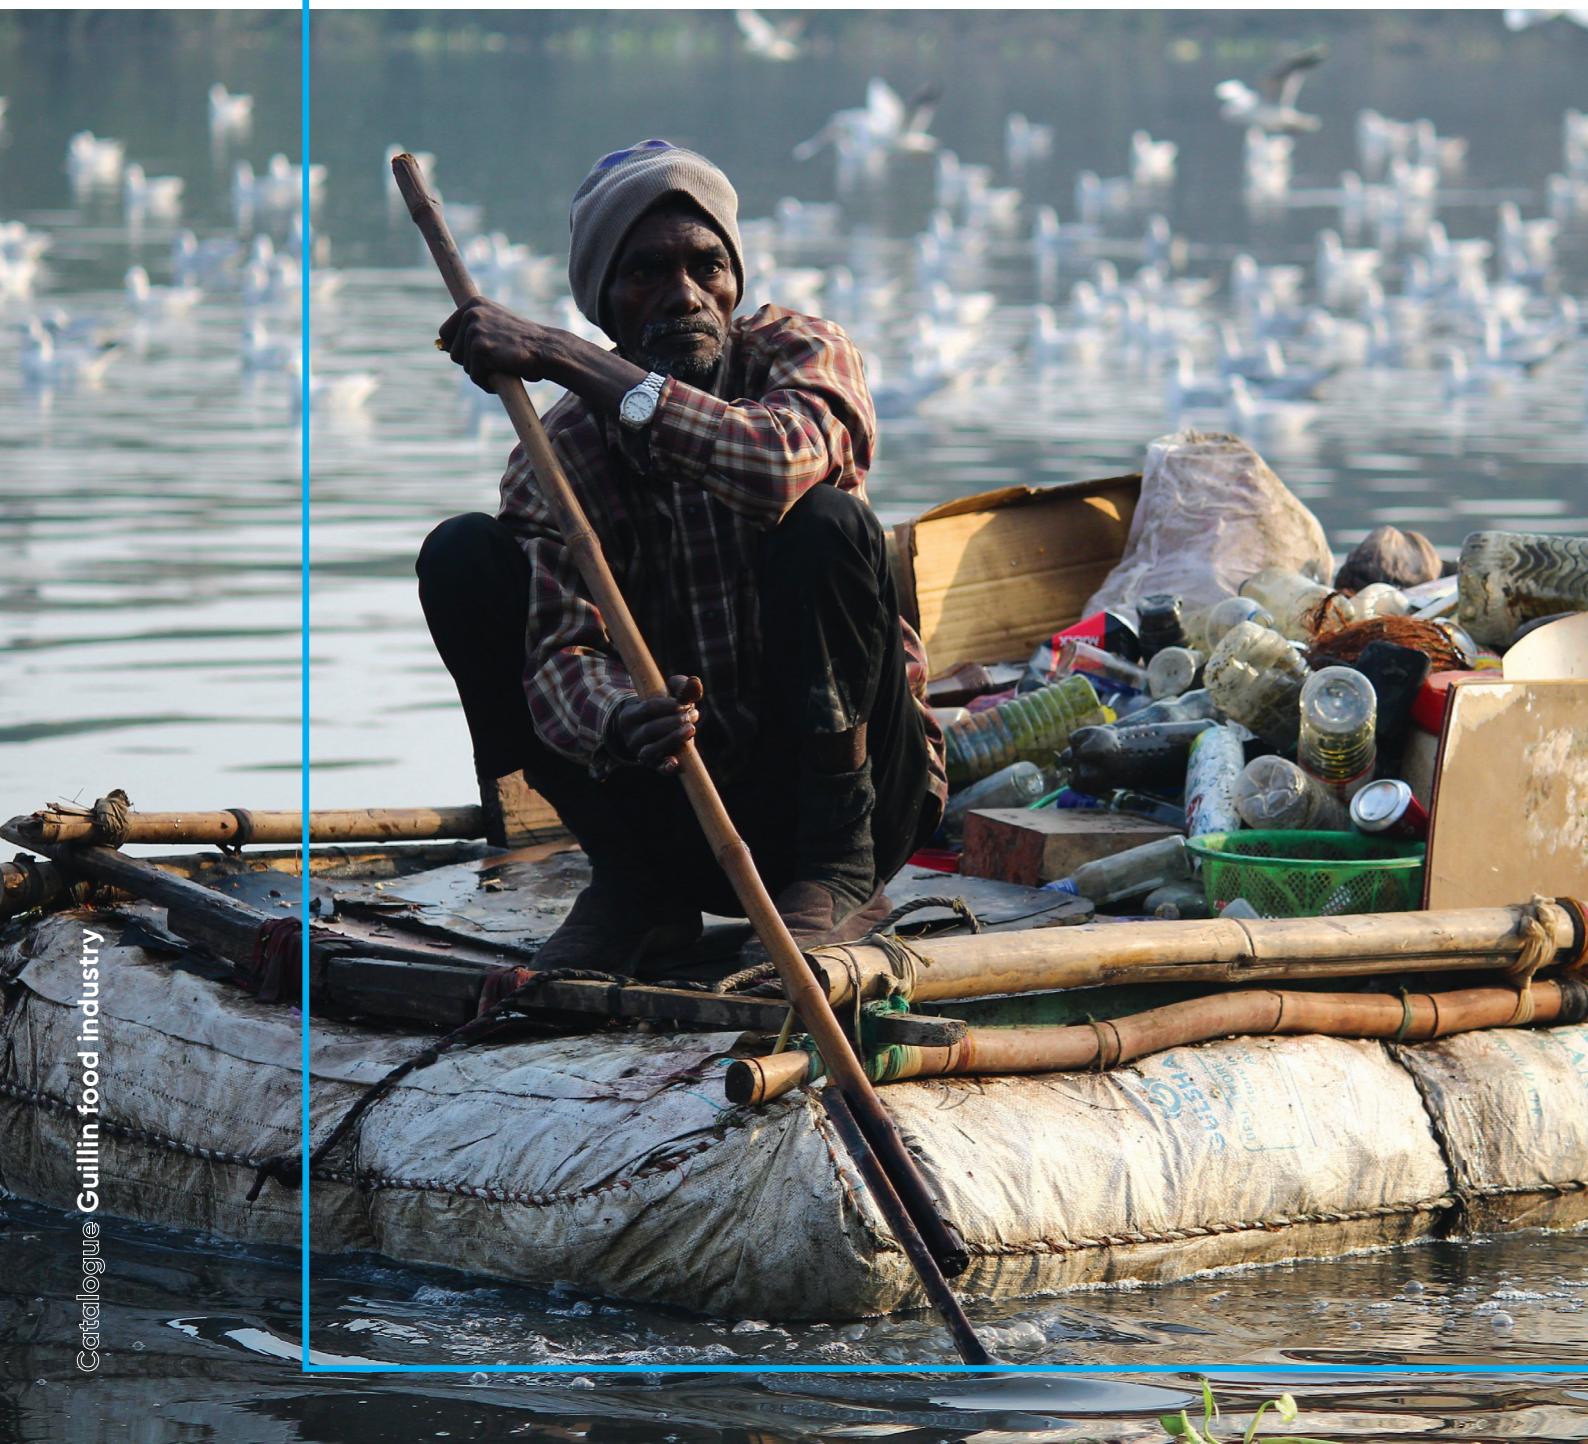

We act so that the circular economy, collection, sorting, recycling and composting of our packaging become mass reality and to encourage responsible behaviour.

In parallel, we started PET collection actions on our sites, which regularly mobilise all our employees.

Finally, we invest in our production sites to make them ecofriendly: closedcircuit water use, low-consumption equipment, no air emissions, automatic waste sorting, energy retrieving from our heat systems in order to heat our buildings, no loss of material pellet (involvement in the Clean Sweep® operation / French MORE 2019 label obtained).

# Prevented Ocean Plastic™

Cartouche® Guillain food industry

Together, let's make plastic its own resource

Committed since 2020 to saving the oceans, GUILLIN is a Founding Partner of Prevented Ocean Plastic™. We incorporate high quality recycled material in our recyclable packaging, collected from the Indonesian coastline and processed in a socially responsible way, certified by OceanCycle®.

Thanks to this partnership, nearly 1 billion plastic bottles will not end up in the rivers and oceans.

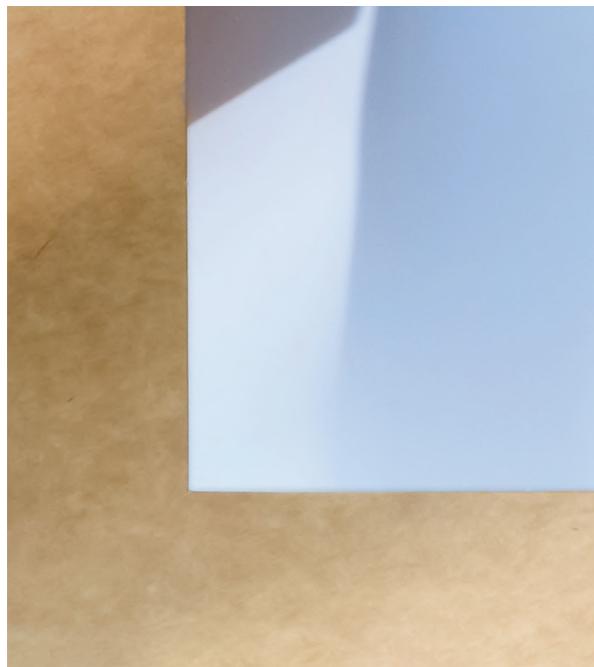

With this strong commitment, we hope to encourage responsible behaviour. If thrown in the right bin, plastic can be collected, sorted and recycled: it becomes its own resource. Together, let's make sure that this happens.

**Nearly 1 billion bottles**

# Our materials

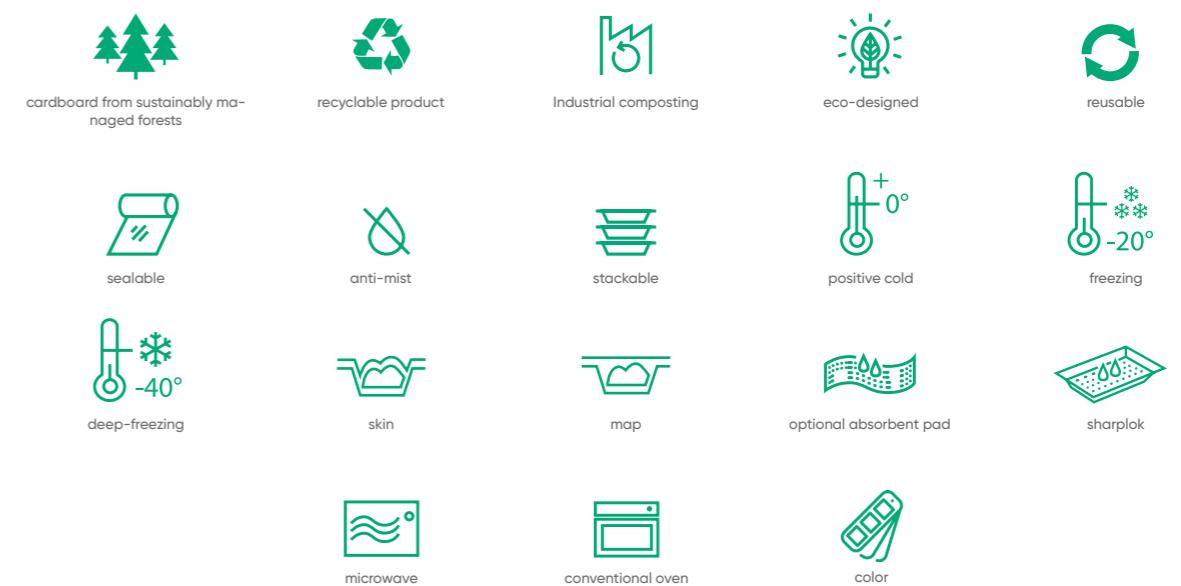

## & their properties

	DEFINITION	RECYCLING	PROPERTIES & USES	BEHAVIOUR AT TEMPERATURE
PET/rPET*	New and recycled polyethylene terephthalate	✓	For cold use Ultratransparent	-40°C / +60°C
PP	Polypropylene	✓	Reheating and keeping warm Microwavable	-20°C / +120°C
Cardboard	Wood pulp Flat cardboard	✓	Tenue au froid Tenue au chaud	-20°C / +40°C
	Corrugated cardboard			
Hybrid	PP-coated cardboard bases or cardboard base	✓	Coated cardboard base, PP lid microwavable	-20°C / +120°C
	Cardboard bases and rPET or PP lids		Sealable rPET base	

\*Items shown as rPET in this catalogue: our PET packaging contains at least 30% rPET and can be recycled.

All our materials are recyclable, compostable or reusable  
Symbols used in this catalogue and on products

Info tables from page 26 to 89:  
Non-contractual drawings, photos and colours. The company reserves the right to modify the type of material. See General Sales Conditions page 95.

**Transparent.**  
Lightweight, durable.  
Hygienic and suitable for food contact.  
Shock and temperature resistant and temperature resistant from -40°C to +60°C.  
Recyclable.

## PET/rPET The most transparent solution

Why is polyethylene terephthalate such a useful material? It is transparent, impact-resistant, and able to withstand low temperatures. Of course, it is also waterproof and impermeable to gas and aroma components.

PET can be recycled and reused, especially now sorting rules have been simplified.

## PP The most versatile solution

**Soft and flexible.**  
Transparent or available in different colours.  
Microwavable or can withstand reheating temperatures of up to 120°C.  
Recyclable and reusable.

Polypropylene is the most suitable material for reheating food products due to its ability to withstand high temperatures.

It is perfectly suited to recycling using standard sorting and waste recovery channels.

Available in transparent, white or coloured versions. This material is particularly resistant to abrasion and bending.

All products marked as ALTER ECO RECYCLE can be recycled.

## Cardboard and hybrid Cardboard /PET or PP The most customisable solution

**Lightweight, easy to use.**  
Customisable.  
Can be adapted to a range of different constraints (protection, impermeability, contact with food, etc...).  
Recyclable, compostable.

This material consists of several layers of paper made from wood pulp, which is then shaped or folded and may have a film coating on the inside to prevent leaks.

Cardboard has a whole host of aesthetic and mechanical properties, no matter what dimensions you require.

This material is identified in sorting centres. All our products are made from virgin fibres, suitable for use with foodstuffs, and can be recycled in standard paper/cardboard waste streams.

## SHARPOK

The SHARPOK system is designed to reduce, or even avoid, the use of an absorbent pad in trays intended for meat, fish and poultry.

Thermoforming is the technology used to create the special reservoirs that are designed to collect any excess juice and drips, thus dispensing with the need for an absorbent pad.

The moisture remains in the cavities thanks to liquid surface tension and capillary action, preventing leaks as a result.

Ongoing market demand to do away with the absorbent pad led to the current design of the SHARPOK range, based on the packaging's ability to retain more juices.

## A unique concept for food packaging solutions to protect fresh products under safe and hygienic conditions

<b>Packaging Safety Protection</b>	<b>For preparation or cooking</b>	<b>For portioning and reducing food waste</b>
<b>Ensuring excellent visibility</b>	<b>From store to home</b>	<b>For serving at the table reheating</b>
<b>Makes recycling easier</b>		

## Our mission

Impeccable quality and service for faultless security.

The GUILLIN Group companies working in the food industry are the premier suppliers to meat (beef and pork) and poultry processors. The biggest brands and producers in the sector place their trust in us.

## What we offer

Our companies' expertise is based around three main elements. First is the large range of PET, PET/PE and PP trays that cover all standard formats in use and all uses. Second is an efficient logistics organisation that allows us to keep 80% of reference articles in stock for next-day or 48-hour delivery. This is a key response rate for industrial producers and hypermarkets and supermarkets. Third is observance of extremely strict production standards, a commitment that is even more essential given the sensitive nature of the products.

Upstream, the Group works with all sealing equipment manufacturers and film suppliers, whatever the material, in order to guarantee that its trays are perfectly suited to all sealing systems. Automation of industrial clients' production lines is considered in the design of our products to ensure that production speeds can be met.

A team of expert engineers is available to help and support with advice in the case of problems or to simply help optimise your system.

## Innovative and responsible **packaging** solutions: guaranteed

Like **MAPTIPACK** classified as ALTER ECO RECYCLE, our eco-designed range of packaging for protein products, made from recyclable mono material, is new to the market, geared to food production lines and safe, while still managing to be environmentally friendly.

Our mono-material solutions offer excellent sealing qualities, guaranteeing that delicate products like cuts of meat or seafood will be fully protected, just as they should be.

Our rPET is transparent, perfect for showcasing products, and is ideal for use on self-service counters.

**Every material in our range is recyclable:**

rPET, PP or even cardboard offer a wide selection so you can find the best way to display your products on the shelf, while still guaranteeing optimum protection depending on the various processes used, e.g. MAP or SKIN.

All our packaging is manufactured in Europe and in France, thus reducing its carbon footprint.

We have a large number of standard product ranges, all available in stock.

Our wide range of solutions (sealable containers, bowls and trays) are the perfect answer for ready meals. They are ideally suited to the various packaging processes: automatic denesting, hot filling, pasteurisation, MAP, SKIN, etc... Their stability is a real boon. Sold in large supermarkets or in takeaway restaurants, our solutions will also allow you to offer added value in terms of user and consumer services; not least their heat resistance and the option to eat straight from the packaging. Our range of recyclable materials means we can offer a vast selection to enhance your products and make you stand out from the crowd. All while providing optimum protection with eco-friendly packaging labelled as Alter Eco Recycle or Alter Eco Bio.

Capacity: 250 to 3,200mL.

Small formats can be customised for quantities of 10,000+,  
5000+ for large formats.

Whether they're made from rPET or cardboard, our mono-material solutions with separate lids are easy to use. They are designed to ensure optimum preparation and chilled storage of your products. These transparent containers are a major boon for self-service counters, showcasing your products perfectly. They also offer added benefits for users in that the contents can be transported, stored and eaten on the go. Guaranteed recyclable, whichever solution you choose, be it Alter Eco Recycle or Alter Eco Bio.
